

=====

GENESIS POINT — PIRATE ISLANDS

MASTER OVERVIEW (CANON)

=====

SECTION PURPOSE

Defines the Pirate Islands region, its ecological, geological, domai-suppression mechanics, and the strategic reasons why pirates can operate there while kingdoms cannot occupy, eradicate, or blockade the region. This section intentionally precedes pirate culture, cities, or governance, anchoring piracy in environmental inevitability rather than politics.

WORLD SCALE & MAP CONTEXT

- Genesis Point world diameter: ~80,000 miles
- Ocean surface area: tens of millions of square miles
- Pirate Islands are NOT small islands; they are continent-scale landmasses fragmented into volcanic archipelagos.
- Pirate Islands lie on the fractured edge of an ancient supercontinent (left side of world map), as opposed to the stable continental cluster of the main kingdom region (right side of map).
- Region includes:
 - Multiple volcanic island chains (lush, green, unstable)
 - Underwater volcanic chains
 - A large, slow (lazy) whirlpool in the bottom-left world region
 - Adjacent sand/desert landmass with internal freshwater seas

GEOLOGY & ECOLOGY

- Islands are geologically active:
 - Constant volcanism
 - Lava flows
 - Ash fall
 - Tectonic instability
- Volcanic ash is rich in carbon and minerals.
- Genesis stone saturation + ash results in:
 - Extremely rapid ecological regrowth
 - Permanently green and lush islands
- Ecology operates in a cycle:
Growth → Destruction → Regrowth → Repeat
- Nature is indifferent to:
 - Humans
 - Chimera
 - Domai
- Islands are NOT barren wastelands; they are hostile abundance zones.

DOMAI FAILURE MECHANICS (CORE RULE)

- Domai cannot flourish or persist long-term on Pirate Islands.
- Failure is NOT instant annihilation; it is stagnation and starvation.

Mechanisms:

- Lava destroys domai energy veins used to collect Genesis energy.
- Ash burial blocks energy pathways.
- Heat destabilizes domai heart coherence.
- Domai hearts may survive briefly under lava but:
 - Cannot feed
 - Cannot expand
 - Cannot stabilize
- Repeated eruptions eventually eliminate domai remnants.

Result:

- Low domai density
- No domai empires
- No domai territorial dominance

CHIMERA SUPPRESSION

- Chimera may form or arrive but cannot persist.
- Lava, ash, gas, and unstable terrain kill chimera indiscriminately.
- Local wardens actively remove surviving chimera.
- No special anti-chimera rules exist; nature performs suppression.

GENESIS STONES & HEAT INTERACTION

- Genesis stones do NOT dissolve or vanish when chimera die.
- Genesis stones are:
 - Structurally finalized
 - Geometric
 - Highly heat-resilient
- Lava:
 - Kills chimera
 - Buries domai
 - Encases genesis stones in hardened basalt
- Genesis stones require:
 - Act of will
 - Rune interference
 - Focused crushing force to break into dust.
- Heat alone is insufficient to destroy genesis stones.

PIRATE RESOURCE DOCTRINE

Pirate Islands are not homes; they are extraction zones.

Pirates use the islands for:

- Genesis stone harvesting (from cooled lava flows)
- Lumber harvesting (rapidly regrown forests)
- Chimera hunting and suppression
- Sustainment of pirate fleets and floating cities

Pirate operations are:

- Scheduled
- Cyclical
- Temporary
- Non-permanent

----- PIRATE LAND OPERATIONS -----

- Pirates maintain their own chimera forces.
- Chimera are used tactically:
 - Assault screens
 - Domai suppression
 - Counter-chimera engagements
- Pirates rarely assault active domai directly.
- Domai assaults are elite-only, calculated, and rare.
- Typical extraction cycle:
 1. Volcanic reset kills domai/chimera
 2. Lava cools, stones encased
 3. Pirate assault force secures area
 4. Extraction crews mine basalt
 5. Lumber crews fell mature trees
 6. Raw materials transported off-island
 7. Processing occurs in floating pirate cities

----- LUMBER & TECHNOLOGY -----

- Wood is a primary technological material.
- No large-scale steel shipbuilding infrastructure exists.
- Pirate ships and floating cities are wooden, reinforced via runes and Genesis augmentation.
- Islands provide raw logs only.
- No on-island industry or refinement.

----- WHY KINGDOMS CANNOT OCCUPY THE ISLANDS -----

- No stable ground for fortifications.
- No permanent infrastructure possible.
- Continuous domai and chimera threats.
- Volcanic activity overwrites all construction.
- Humans are more fragile than chimera.
- Sustaining a garrison is impossible.
- Floating cities would be static, siegeable, and unsupplied.

Conclusion:

- Occupation is ecologically and logistically impossible.

----- WHY BLOCKADES FAIL (STRATEGIC RULE) -----

- The world is too large to blockade effectively.
- Pirate Islands span massive surface areas.

- Approach vectors are innumerable.
- A blockade requires sustainment, not just ships.
- Pirates only need occasional access, not constant access.
- Static forces lose to mobile, timing-based predators.

Kingdom response:

- Escort merchant convoys
- Defend trade routes
- Accept pirate persistence as a cost of scale

GLOBAL PERCEPTION

- Pirate Islands are widely known and labeled on maps.
- Everyone knows pirates operate there.
- No kingdom claims sovereignty.
- The region is considered ungovernable.
- Pirate influence exists through use, not rule.

ADJACENT DESERT CONTINENT

- Large sand-colored landmass nearby.
- Contains massive internal freshwater seas (land-based oceans).
- Six major lake-centered territories identified.
- Each territory functions as a sovereign tribal power.
- Societies are infrastructure-capable and active.
- Slave labor is culturally normalized.
- Region is the primary global slave trade hub.

PIRATE-DESERT INTERACTION

- Pirates maintain influence, not direct rule.
- Volcanic islands serve as staging grounds.
- Desert territories serve as markets and logistics hubs.
- Pirate floating cities operate within this broader region, never permanently anchoring to the islands.

FINAL CANON STATUS

- Pirate Islands are environmentally ungovernable.
- Domai suppression is natural and inevitable.
- Pirates exist due to timing, mobility, and extraction cycles.
- Eradication and blockade are infeasible by design.
- This section is foundational and precedes pirate culture, governance, and city design.

STATUS: LOCKED
