

GENESIS POINT — BANDITS, WILDS, AND DOMAI SUPPRESSION SYSTEM MASTER OVERVIEW (CANON LOCK-IN)

I. GEOGRAPHIC & SOCIETAL LAYOUT

1. Sanctuaries

- Three primary floating cities.
- Each sanctuary is a large black disc city.
- Arranged in a deliberate triangular configuration in the sky.
- Contain noble tiers (upper/lower) and commoner populations beneath them on the ground.
- Sanctuaries do NOT individually project Domai suppression.

2. Central Hub Disc

- A smaller black disc located at the exact geometric center between the three sanctuary discs.
- Approximate scale: multi-mile radius (order-of-magnitude ~5 miles).
- Unpopulated or minimally staffed.
- Exists solely to support the Sanctuary Ring.
- Considered critical infrastructure, not a city.

3. The Wilds

- All land outside the sanctuary suppression bubble.
- Unclaimed, unstable, and dangerous.
- Primary territory for bandits, cartels, and roaming threats.
- Domai formations and chimera events may occur naturally here.
- Travel between sanctuaries necessarily passes through the Wilds.

II. SANCTUARY DOMAI SUPPRESSION SYSTEM

4. Sanctuary Ring (Primary Suppression Engine)

- A massive circular ring suspended above the central hub disc.
- Orientation: perfectly horizontal (parallel to the ground).
- Diameter: multiple miles.
- Engraved continuously with runes along its surface.
- Slowly rotates in place ("lazy rotation").
- Rotation is constant and functional, not decorative.
- Locked in position relative to the hub disc (does not orbit or drift).

5. Sanctuary Suppression Bubble

- A single unified suppression field projected by the Sanctuary Ring.
- Encompasses:
 - All three sanctuary cities.
 - The airspace between them.
 - The ground far below.
- Prevents the conditions required for Domai formation from stabilizing.
- Does NOT destroy Genesis energy.
- Does NOT react to Domai.
- Instead, prevents Domai nucleation entirely within the radius.
- Sanctuaries are collectively stabilized; none are independently protected.

6. Functional Philosophy (Sanctuary Scale)

- Preventative, not reactive.

- Harmonizing rather than resisting Genesis pressure.
- Creates an area where Domai “never finish forming.”
- Produces a calm, timeless, stable environment.
- The sanctuaries orbit safety; safety does not orbit them.

III. BANDITS OF THE WILDS

7. Bandits (General Role)

- Persistent nuisance threat during travel between sanctuaries.
- Primary danger for caravans and long-distance movement.
- Force travelers to hire guards and plan logistics.
- Serve as narrative pressure during long journeys.
- Tactics include:
 - Road obstructions (logs, collapsed bridges).
 - Ambushes.
 - Night raids.
 - Kidnapping for ransom (especially nobles).
 - Theft of cargo and supplies.

8. Bandit Settlements

- Small, hidden towns or camps located in the Wilds.
- Designed to be temporary and relocatable.
- Camouflaged and difficult to locate.
- Not permanent cities.
- Rotate locations depending on Domai activity and external pressure.
- Abandoned settlements may remain intact for years.

IV. BANDIT DOMAI SUPPRESSION SYSTEM

9. Portable Suppression Cubes (Bandit-Class Constructs)

- Cube-shaped rune constructs.
- Portable (wagon-transportable).
- Each cube has six rune-etched faces.
- Smaller, cruder, and less elegant than sanctuary systems.
- High value, difficult to replace.
- Illegal or restricted outside sanctuary authority.

10. Cube Function

- Each cube prevents FUTURE Domai formation within a limited local area.
- Cubes do NOT:
 - Cause Domai to form.
 - Increase Genesis pressure.
 - Trigger immediate events when destroyed.
- Cubes act as preventative exclusion devices, not suppression engines.

11. Triangulated Protection Zones

- Bandits typically deploy 2–6 cubes around a settlement.
- Overlapping fields create a protected town zone.
- Precise placement matters.
- Protection exists only while cubes are active and aligned.

12. Cube Removal or Destruction

- Removal/destruction does NOT cause immediate Domai formation.
 - Area simply reverts to baseline Wilds conditions.
 - Domai may or may not form there in the future.
 - Risk is probabilistic, not guaranteed.
 - Allows:
 - Safe dismantling by hunters or militaries.
 - Abandonment without instant catastrophe.
 - Long-term escalation arcs instead of instant events.
-

V. DOMAI BEHAVIOR (ESTABLISHED RULES)

13. Domai Characteristics

- Structured, not random.
- Sporadic in occurrence.
- Can be small or large.
- Require specific conditions to stabilize.
- Do not appear everywhere all the time.

14. Domai Escalation

- Small Domai may appear independently.
- Larger Domai may expand over time.
- Separate Domai can merge.
- Merged Domai create large regional danger zones.
- The largest Domai become multi-year campaign-scale events.

15. Relationship to Suppression Systems

- Sanctuary Ring: prevents Domai from ever forming locally.
 - Bandit Cubes: prevent future Domai from initiating locally.
 - Removal of protection does not create Domai; it only removes safety.
-

VI. BANDIT HUNTERS / ADVENTURERS

16. Bandit Hunters

- Specialized adventurers focused on hunting bandits.
- Always-open bounties issued by:
 - Sanctuaries.
 - Merchant coalitions.
 - Noble houses.
- High-risk, high-reward profession.
- Targets include:
 - Bandit leaders.
 - Camps.
 - Suppression cubes.
 - Supply routes.

17. Narrative Role

- Maintain road viability without eliminating danger.
- Create recurring rivalries.

- Provide lawful violence in the Wilds.
 - Act as pressure valves preventing total collapse into chaos.
-

VII. DESIGN & THEMATIC CONTRAST

18. Sanctuary System

- Centralized.
- Permanent.
- Elegant.
- Continuous.
- Preventative.
- Harmonized with Genesis.

19. Bandit System

- Distributed.
 - Temporary.
 - Utilitarian.
 - Discrete.
 - Conditional.
 - Resistant to Genesis.
-

VIII. CANON STATUS

20. Canon Lock Notes

- Sanctuary Ring is horizontal, not vertical.
- Ring rotates slowly and continuously.
- Ring + hub disc create a shared suppression bubble.
- Bandit cubes do not cause instant Domai formation when destroyed.
- Domai escalation is slow, structured, and contextual.
- Wilds danger is systemic, not scripted.
