

=====

GENESIS POINT — SANCTUARY, CITY, & VAEUM SYSTEM OVERVIEW (CANONICAL)

=====

SECTION A — SANCTUARY MACRO-STRUCTURE

- Sanctuaries are circular megastructures with a radius of ~23 miles.
- Sanctuaries are divided into 7 primary districts arranged radially:
 - Red
 - Orange
 - Yellow
 - Green
 - Blue
 - Violet
 - White (civic / infrastructure)
- Sanctuaries are elevated (~2 miles or more above ground level).
- Sanctuaries are iron-based structural frames infused with Genesis dust.
- Structural integrity is maintained via rune-enabled weight normalization and spatial locking.
- Elevators and vertical transit are core enabling technologies.

SECTION B — DISTRICT CHARACTER & SOCIAL STRATIFICATION

- District color correlates with:
 - income
 - access
 - architectural flourish
 - visibility
- Red → low-income, mass population.
- Orange / Yellow → working and skilled classes.
- Green → upper skilled, foremen, specialized magi.
- Blue → high-income elite, administrators, senior overseers.
- Violet → nobility, legacy wealth, leisure.
- White → civic authority, governance, infrastructure only.
 - No permanent residents.
 - Empties after work cycles (business-park life cycle).
 - Employs citizens from all districts.

SECTION C — DIMENSIONAL DISTRICT WALLS & ARCHES

- Each district is separated by a massive dividing wall.
- Walls are iron-based (not stone).
- Walls include:
 - Physical arches (walk-through, non-magical).
 - Integrated rune systems for navigation, lighting, signage.
- Arches allow:
 - Direct passage between adjacent districts.
 - No teleportation or dimensional displacement.
- Walls also contain embedded dimensional gate functions for long-distance routing.

SECTION D — CENTRAL SANCTUARY HUB

- Central hub radius $\approx$ 3 miles from sanctuary center.
- Hub functions:
 - Vertical travel (sanctuary ↔ ground cities).
 - Major transit interchange.
 - Caravan, wagon, and pedestrian routing.
- Hub uses terminal-based system:
 - Terminals map to zones in ground cities.
 - No 1:1 district mirroring between sanctuary and ground city.
- Access control:
 - Credentialed zones (nobility, civic authority).
 - Public terminals for general travel.
- Hub walls have:
 - Outer face: sanctuary-facing access.
 - Inner face: ground-city dimensional mapping.

SECTION E — GROUND CITIES

- Ground cities predate sanctuaries (legacy cities).
- Square layout ($\sim 8 \times 8$ miles $\approx$ 64 sq miles typical).
- Zoned into:
 - Red, Orange, Yellow, Green, Civic (White equivalent).
- Cities are fortified against chimera events.
- Multiple internal checkpoint gates allow:
 - Zone lockdown
 - Traffic control
- Central civic district mirrors white district functionally.
- Dimensional gates connect ground cities to sanctuary hubs.

SECTION F — ROAD & BLOCK ENGINEERING (GROUND CITIES)

- City grid based on 660 ft x 660 ft cells.
- Building footprint $\approx$ 570–600 ft square.
- Perimeter buffer $\approx$ 30 ft per side.
- Resulting corridors:
 - ~ 60 ft wide between buildings.
- Typical corridor allocation:
 - 4 wagon lanes (~ 15 ft each)
 - Sidewalks integrated by borrowing from building footprint.
- Designed to accommodate large caravans and fifth-wheel wagons.

SECTION G — AGRICULTURAL SYSTEM (SUB-SANCTUARY)

- Agriculture is NOT stacked above districts.
- Agricultural slices hang BELOW sanctuaries.
- Each district has agricultural slices beneath it.
- All districts may have agricultural slices (including Violet).
- Agricultural slices are:
 - Arc-shaped segments
 - ~ 3 miles wide
- Light & air supplied via:
 - Sunlight capture layer beneath white district
 - Photonic projection downward through slices
- Slices are vertically chained via light projection and rune matrices.

- No residential use below sanctuary disk.

SECTION H — AGRICULTURAL SLICE CONSTRUCTION

- Agricultural slices are grown, not assembled.
- Construction method:
 - Rune-inscribed vertical cylinders ("pylons").
- Each agricultural slice uses:
 - 120 cylinders along arc midline (~19.3 miles).
- Cylinder properties:
 - ~200 ft tall
 - Small radius
 - Spatially locked to underside of sanctuary or slice above.
- Cylinders project overlapping energy fields.
- Overlap defines smooth continuous arc curvature.
- Endpoint cylinders enforce left/right end caps.
- Redundancy:
 - Loss of many cylinders does not destabilize slice.
- Growth produces iron-based, Genesis-dust-infused foundation.

SECTION I — DISILLUSION (DISSOLUTION) SYSTEMS

- Disillusion fields unmake matter back into base energy.
- Used for:
 - Waste processing
 - Excess material removal
 - Water regulation
- Cultural philosophy:
 - Create → use → unmake
 - Equilibrium over accumulation
- Civic engineers rely heavily on these systems.

SECTION J — RUNE UTILIZATION (INFRASTRUCTURE)

- Runes are ubiquitous but subtle.
- Used for:
 - Lighting
 - Directional guidance
 - Traffic flow indicators
 - Gate status (green/yellow/orange/red congestion signals)
- Runes can be:
 - As small as 8"x8"
 - Grid-linked
 - Activated manually or automatically
- Rune paths may animate directionality (flow arrows).
- Dimensional walls often feature:
 - Waterfalls
 - Backlit rune lattices
 - Night illumination

SECTION K — AITHREN (FORMER "ADVENTURERS")

- Canonical term: aithren (lowercase).

- AI naming convention:
 - Non-possessive
 - Feminine
 - Subordinate but necessary role
- Aithren are:
 - Independent operators
 - Contract-based
 - Not crown military
 - Not noble forces
- Fill capability gaps:
 - Chimera suppression
 - Caravan security
 - Domain incursions
- Exist historically before formal state unification.

SECTION L — VAELUM (ORGANIZATION)

- Canonical term: vaelum (lowercase).
- Vaelum are chartered organizations.
- Aithren belong to a vaelum, as nobles belong to a house.
- Vaelum are not places; they are entities.
- Vaelum Row:
 - City district where vaelum offices are located.
- Vaelum are recognized by the Accord Registry (crown-level).
- Vaelum adopted AE-derived naming later in history.
- Organizational role:
 - Sanctioned
 - Contract-bound
 - Subordinate to military and noble authority
- Cultural perception:
 - Necessary
 - Distrusted
 - Wild, non-uniform

SECTION M — BANNER FRAME SYSTEM

- Circle → Noble Houses
- Hexagon → Military
- Diamond → Civic / Crown Authority
- Square → Vaelum
 - Inherited from old guild frame
 - Symbolizes utility, load-bearing, non-sovereignty
